

Accelerating practice change on farms in temperate woodlands

Michelle Young, Project Director Sustainable Farms

Long-term monitoring on farms in BGGW

Field staff undertaking Reptile Survey

Natural assets

LEADING TO

Improved

Farm production Farmer wellbeing Biodiversity

+

Healthy landscapes
Healthy communities
Ecosystem services
(e.g. pollination)
Natural processes

(e.g. water cycling)

Shelterbelts & other plantings Remnant patches of woodland

Paddock trees

Native grasses

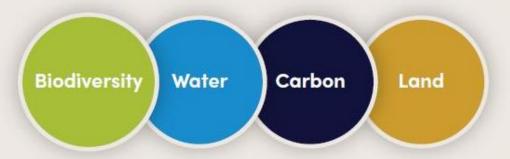

Farm dams

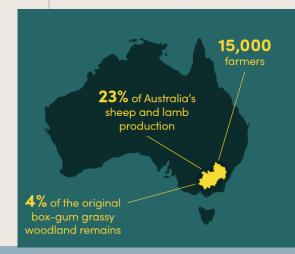

Creeks, wetlands, riparian zones

Rocky outcrops

Soil*

Are a key part of Natural capital

- Validating Farmers observations with good science.
- Promote interactions between researchers & other experts.
- Building confidence of farmers to share findings and ideas

Benefits of restoration

Financial benefits
improved water quality and
vegetation cover = better
livestock outcomes

 Links between natural asset management and improved wellbeing of farmers

What's next?

- Increasing investment in natural capital to support agricultural productivity.
- Predictive frameworks to deliver the tools for a national approach.
