

Before 2016, the environmental sector was taken into the Senegalese national accounts but activity branches and products were dispersed in the different institutional sectors. On 2016, there is a partnership agreement between the Ministry of Environment and Sustainable Development and the National Agency of Statistics and Demography in order to realize an environmental satellite account which aims:

-1st to assess the contribution of environment to GDP ;

-2nd to realize 05 types of environmental accounts according to the Economic and Environmental Accounting System, with the support of Economic Commission for Africa, Food Agriculture Organisation and United Nation Environment.

The selection of these 05 types of accounts was based on national concerns and availability of required data. These 05 accounts are:

- 1- forest and wood resources ;
- 2- land use ;
- 3- water resources and their utilisation ;
- 4- environmental and protection expenditure ;
- 5- environmental goods and services.

Actually, Senegal has just finished the forests and wood resources account, with the assistance missions of UNECA and FAO. More specifically, Supply and Use table (physical and monetary) and stock and flow accounts are carried out accompanied by a methodological note.

In addition, an analysis note that will serve as an advocacy for improving the governance of the forestry sector remains to be elaborated.

Apart from the forest account, land use account is in progress.

So, the future goal for Senegal is the development of the protection expenditure and environment account.

To achieve these objectives, a national survey is envisaged because an administrative collection is not enough to get all data. For that, Senegal needs support and assistance in terms of finance, technic and materia
