Forum of Experts in SEEA Experimental Ecosystem Accounting

28-30 April 2015, New York

Session 5: Structure of Ecosystem accounts – compilation of accounting outputs and tables

Remarks

Jean-Louis Weber

jlweber45@gmail.com

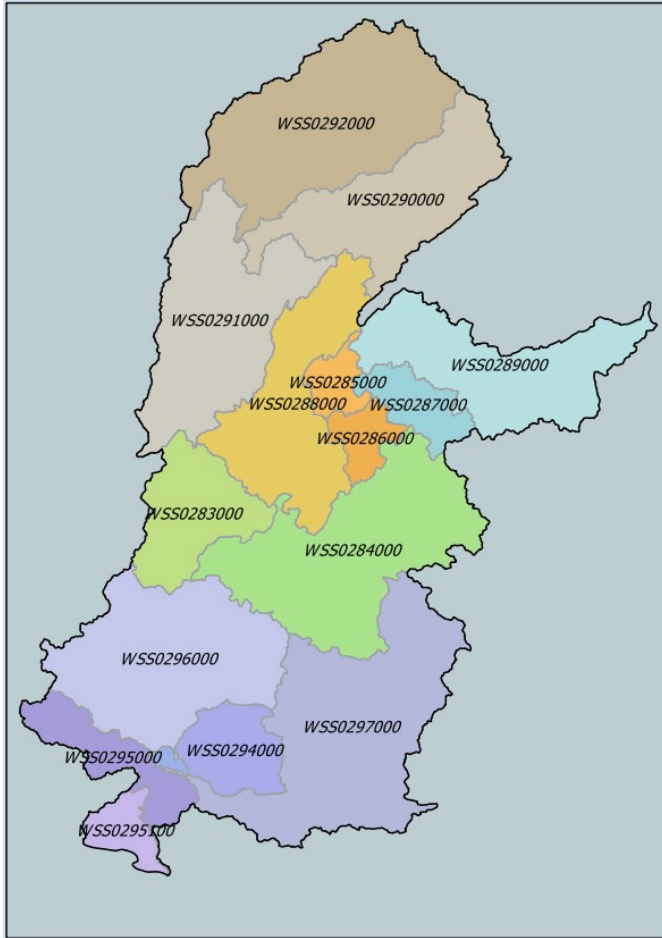

<http://www.ecosystemaccounting.net/>

Expected characteristics of the ecosystem accounting framework fit for a quick start

- As simple as possible, in order to start NOW... Accounts are summaries...
- Modular: to allow several entry points, cooperation, synergies... Modular but not by pieces and bits...
- Structured, systemic, systematic (integrating area and linear units, sketching the full picture, ...) (*next slide*)
- With a clear policy focus: measurement of ecosystem degradation (which includes resource depletion) steady state or enhancement; sustainable access to ecosystem resources/services; economy's accountability with respect to ecosystem degradation...
- Accounting tables with balancing items (meaningful to decision makers...) (*next slide*)
- Making the best use of available data and statistics (not any data, data that fit accounting purpose, validated, with particular emphasis on change, time series...)
- Flexible: possibility at any time to replace a data set with a better one – and to experiment
- Prone at being engineered: data models, scripts to automate production where possible (GIS, DBMS, Statistical packages), cloud computing if appropriate...

Integration of area and linear ecosystem accounting units

The Rhône river catchment

The land cover area units - LCEU

The rivers system units

Ecosystem's skin

Ecosystem's arteries and veins

Ecosystem natural capital accounts being produced for the Upper Rhône river catchment, and France, by École Polytechnique Fédérale de Lausanne (Switzerland) and École Normale Supérieure de Lyon (France).

Example of integration of area (landscape units) and linear (rivers) accounts

Ecosystem Accounting Unit Types		Socio-Ecological Landscape Units (SELU) / Dominant Land Cover Type (DLCT)						s/total landscape ecosystems	River System Units (RSU)/ Homogeneous Stream Reach Units (HSRU) classes					s/total river systems	Total inland ecosystems
		UR <i>Urban/ developed areas</i>	LA <i>Large scale agriculture</i>	AM <i>Agriculture mosaics</i>	GR <i>Grassland</i>	FO <i>Forest cover</i>	NA <i>Other natural land cover</i>		ND <i>No dominant land cover</i>	HSR1 <i>Large rivers, main drains</i>	HSR2 <i>Medium rivers, main tributaries</i>	HSR3 <i>Small rivers</i>	HSR4 <i>Brooks, small streams</i>		
II. Accessible ecosystem infrastructure potential															
LC1	Opening stock of land cover in km2														
LEP01	<i>Green background landscape index (GBLI) (average by km2)</i>														
LEP02	<i>Landscape high nature conservation value index (average by km2)</i>														
LEP03	<i>Landscape fragmentation index (average by km2)</i>														
LEP04	<i>Landscape green ecotones index (average by km2)</i>														
LEP05	<i>Other LEP index (average by km2)</i>														
LEP_avg	Average LEP composite index by km2														
NLEP1	Net Landscape Ecosystem Potential = LC1 x LEP_avg														
RS1 Opening stock of rivers in standardized river measurement units (SRMU)															
REP01	<i>River ecosystem background index</i>														
REP02	<i>Rivers nature conservation value index</i>														
REP03	<i>Rivers fragmentation index (obstacles by km2)</i>														
REP04	<i>Rivers green ecotones index</i>														
REP05	<i>Other REP index</i>														
REP_idx	REP composite index														
NREP1	Net River Ecosystem Potential = RS1 x REP_idx														
REP_avg	Average NREP by km2														
LREP1	Landscape River Ecosystem Potential = LC1 x REP_avg														
TEIP1	Opening stock of Total ecosystem infrastructure potential = NLEP1+LREP1														

NLEP

NREP

NREP/ km2

Total ecosystem infrastructure potential

Expected characteristics of the ecosystem accounting framework fit for a quick start

- As simple as possible, in order to start NOW... Accounts are summaries...
- Modular: to allow several entry points, cooperation, synergies... Modular but not by pieces and bits...
- Structured, systemic, systematic (integrating area and linear units, sketching the full picture, ...) *(next slide)*
- With a clear policy focus: measurement of ecosystem degradation (which includes resource depletion) steady state or enhancement; sustainable access to ecosystem resources/services; economy's accountability with respect to ecosystem degradation...
- Accounting tables with balancing items (meaningful to decision makers...) *(next slide)*
- Making the best use of available data and statistics (not any data, data that fit accounting purpose, validated, with particular emphasis on change, time series...)
- Flexible: possibility at any time to replace a data set with a better one – and to experiment

Accounts' sequence in ENCA-QSP – example of ecosystem carbon

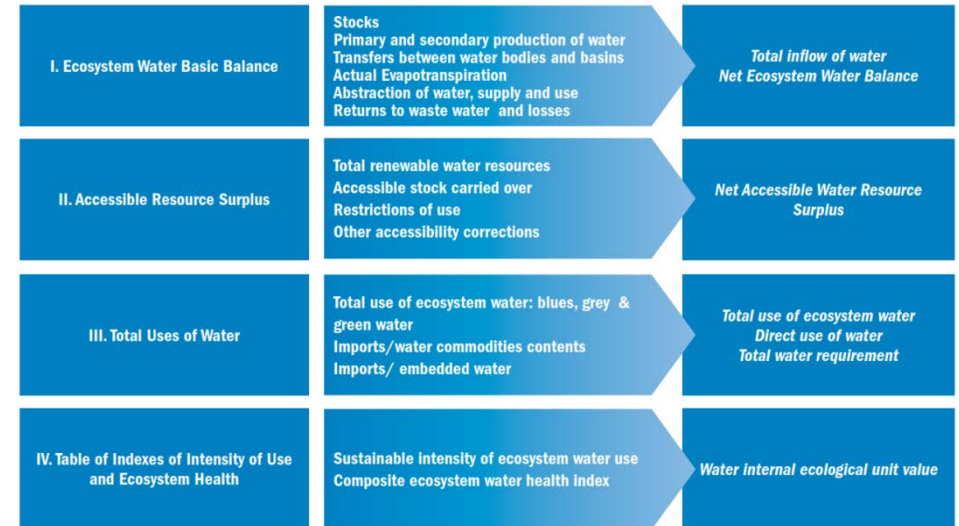

Accounts	Main items	Typical indicators/ balancing items
I. Ecosystem Carbon Basic Balance	Stocks Primary and secondary production of biocarbon Withdrawals Natural perturbations	<i>Total inflow of biocarbon</i> <i>Net Ecosystem Carbon Balance</i>
II. Accessible Resource Surplus	Total inflow of biocarbon Accessible stock carried over Restrictions of use Other accessibility corrections	<i>Net Accessible Resource Surplus</i>
III. Total Uses of Ecosystem Bio and Geo-Carbon	Total use of biocarbon Imports/biocarbon commodities contents Imports/ embedded biocarbon Direct use of fossil carbon Fossil carbon embedded into commodities	<i>Direct use of biocarbon</i> <i>Biocarbon requirement</i> <i>Total carbon requirement</i>
IV. Table of Indexes of Intensity of Use and Ecosystem Health	Sustainable intensity of ecosystem carbon use Composite ecosystem biocarbon health index	<i>Biocarbon ecological internal unit value</i>

ENCA-QSP: the same accounting structure for the 3 basic components

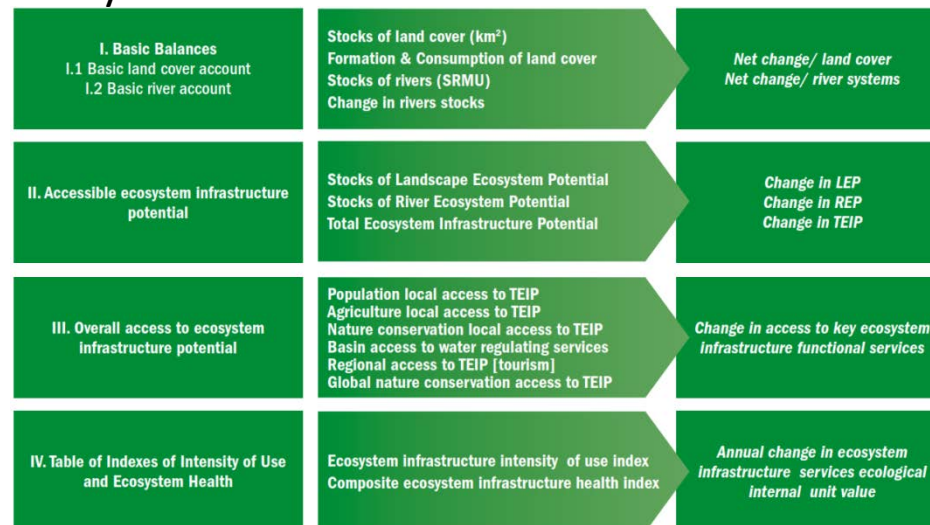

Ecosystem carbon

Ecosystem water resource

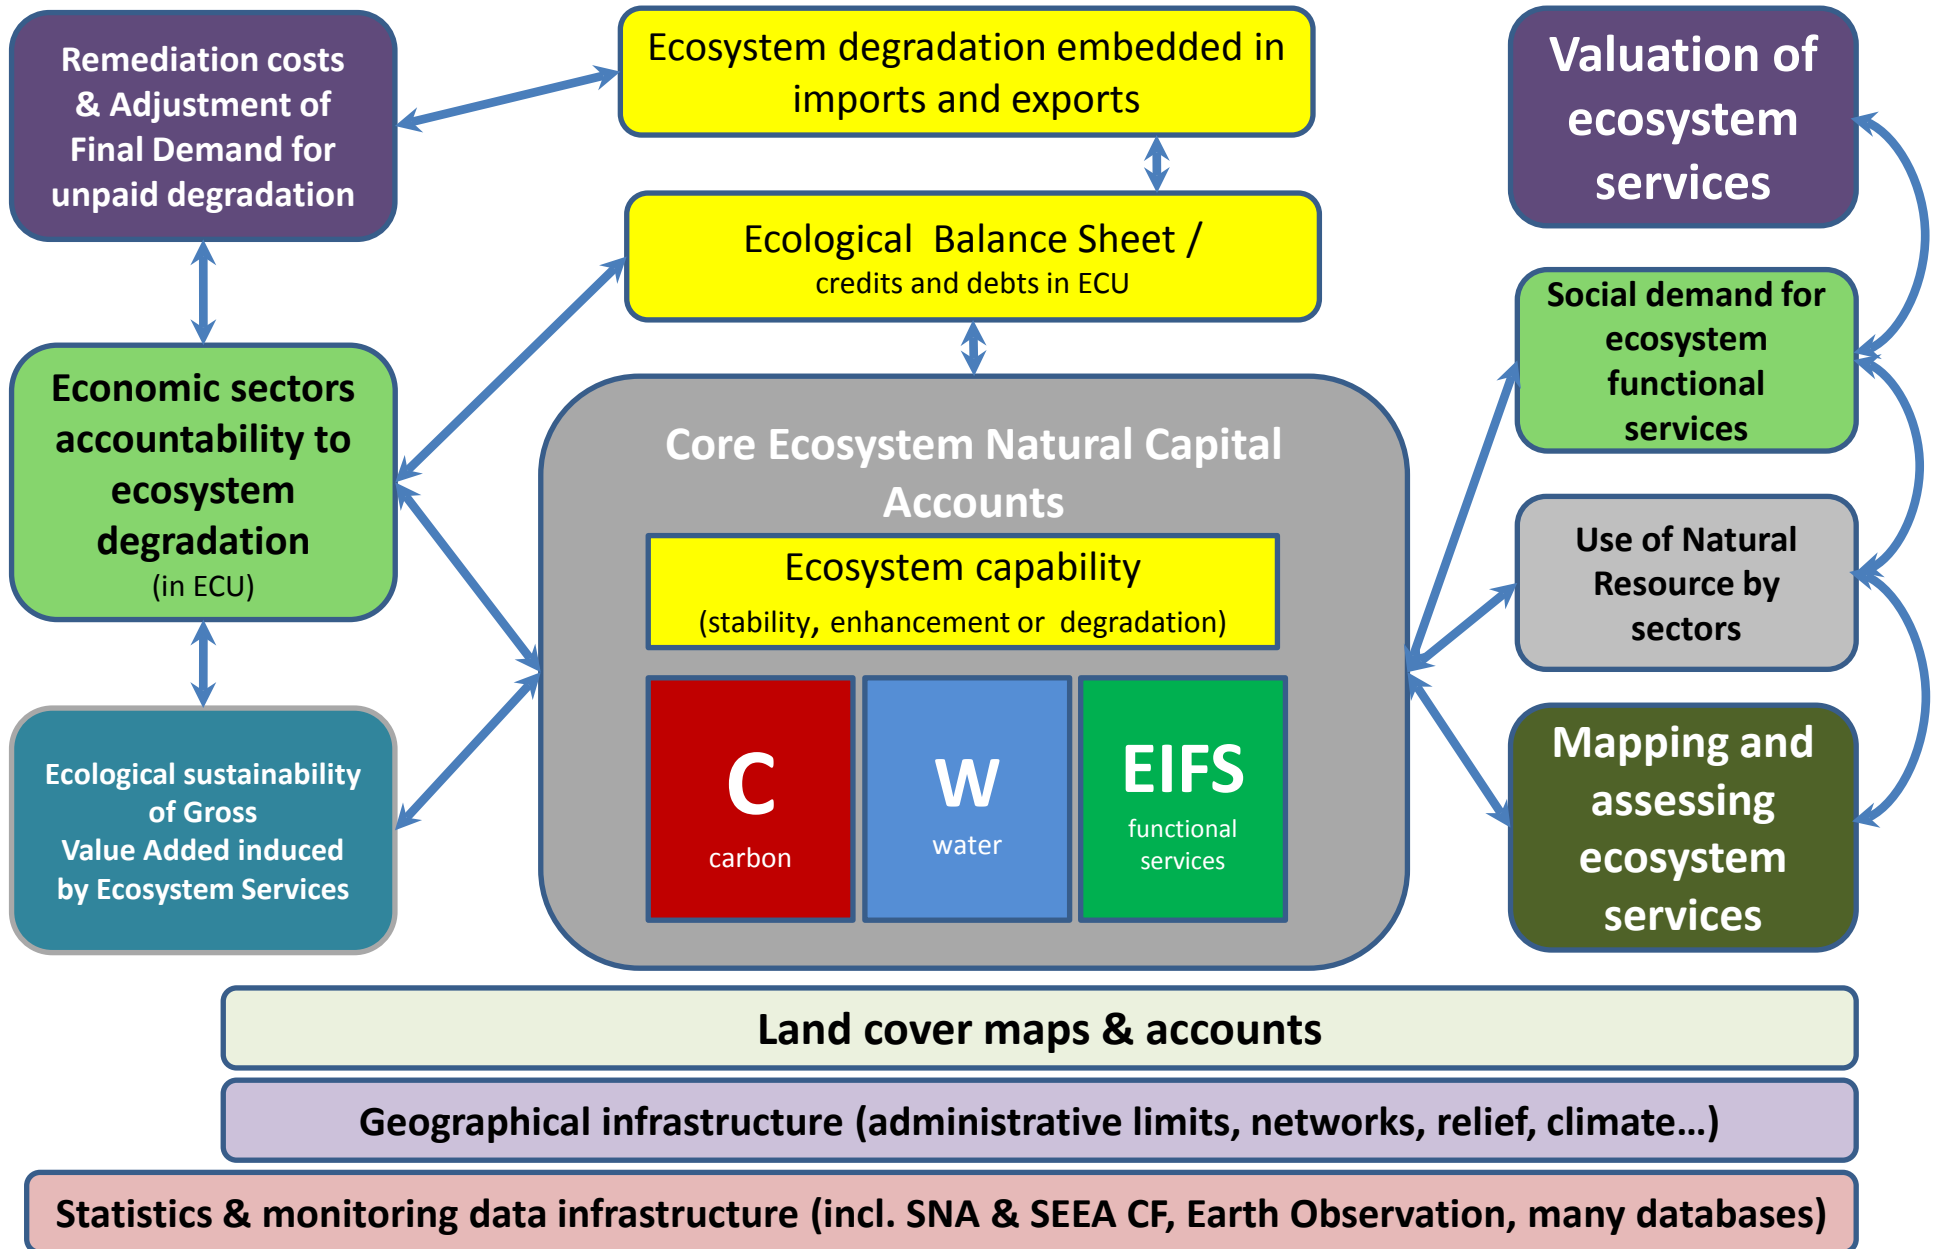

Ecosystem infrastructure functional services

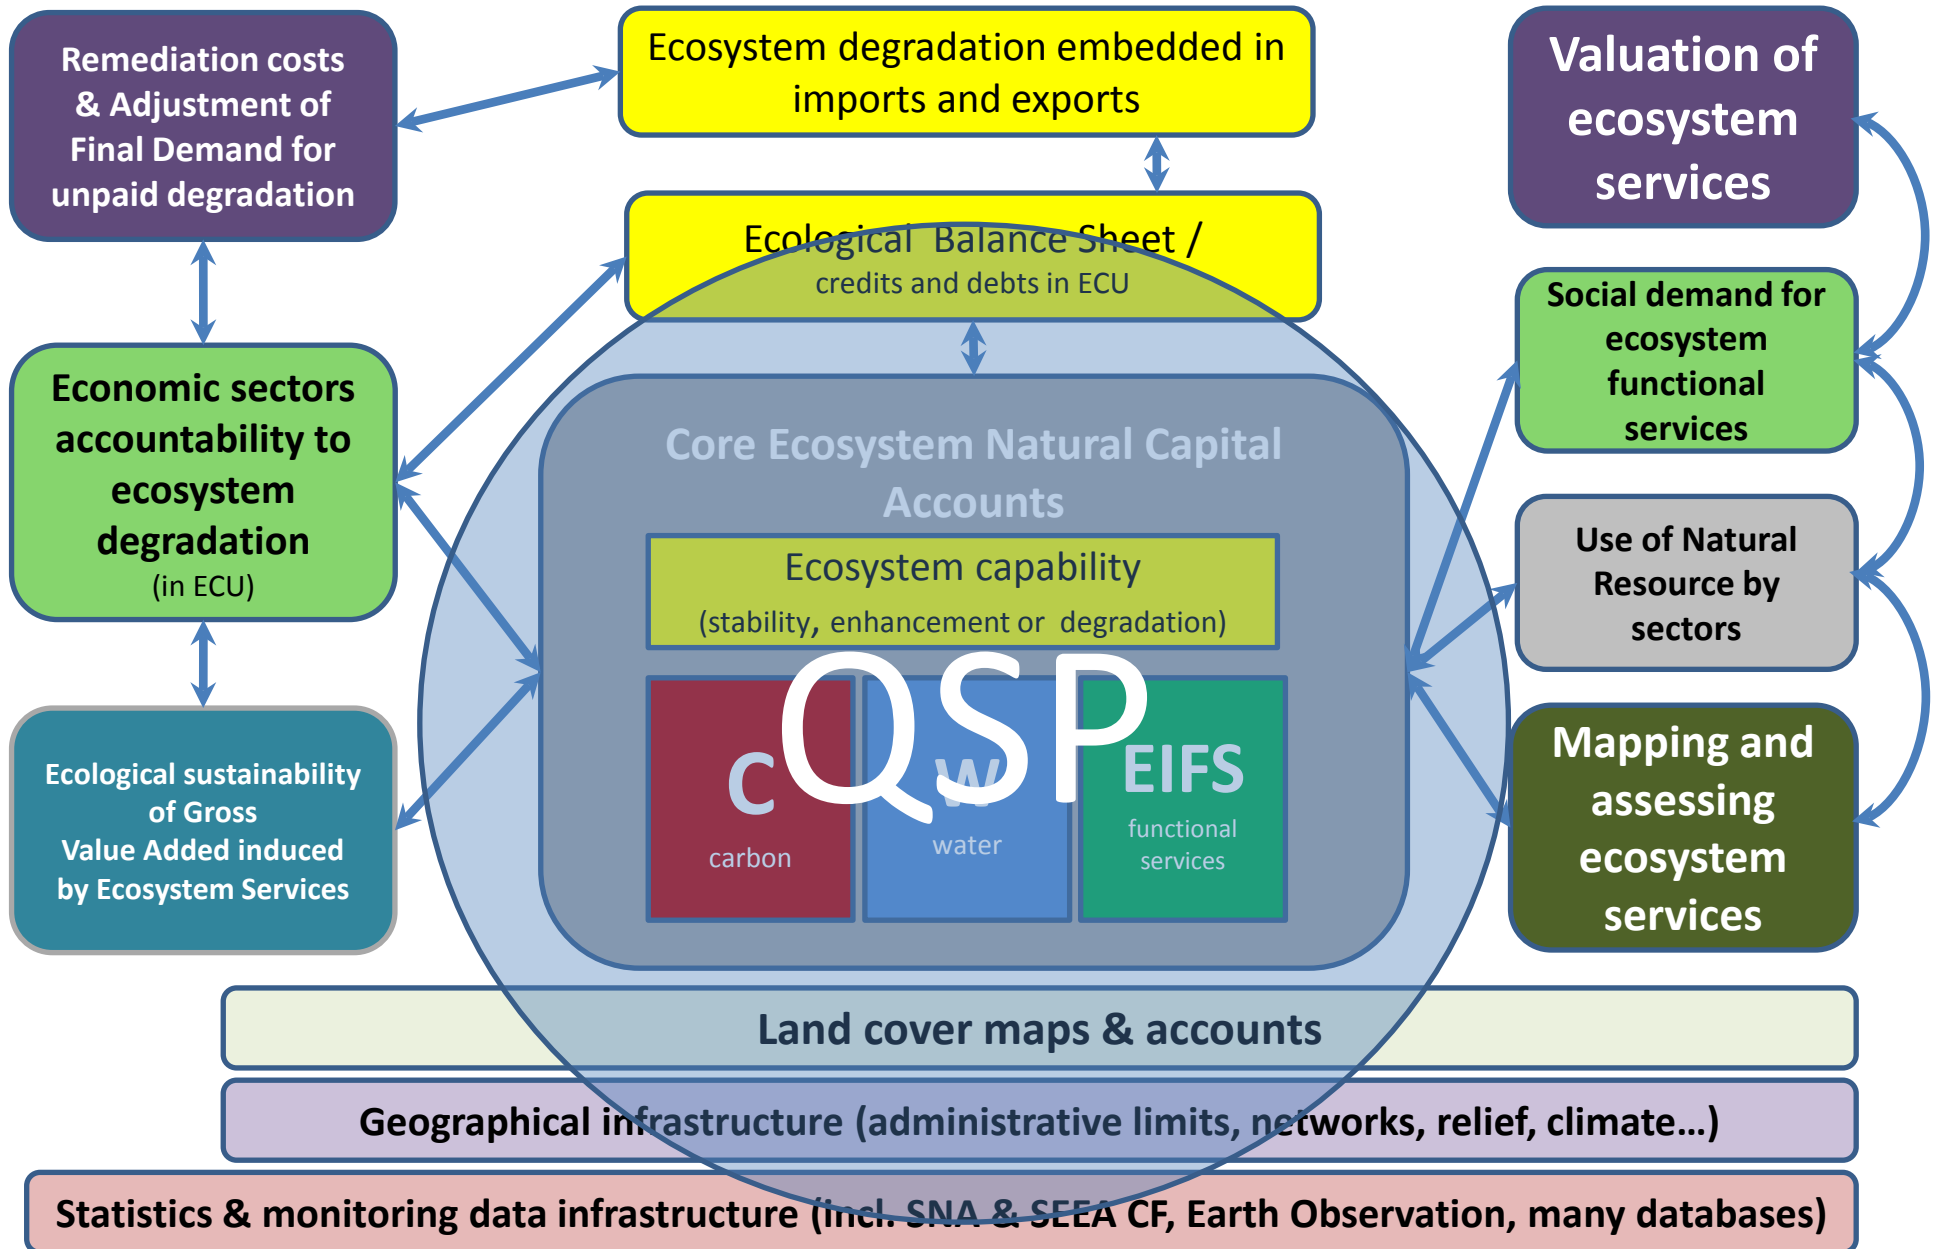

all 3 based
on land
cover
accounts

Structure of Ecosystem Natural Capital Accounts

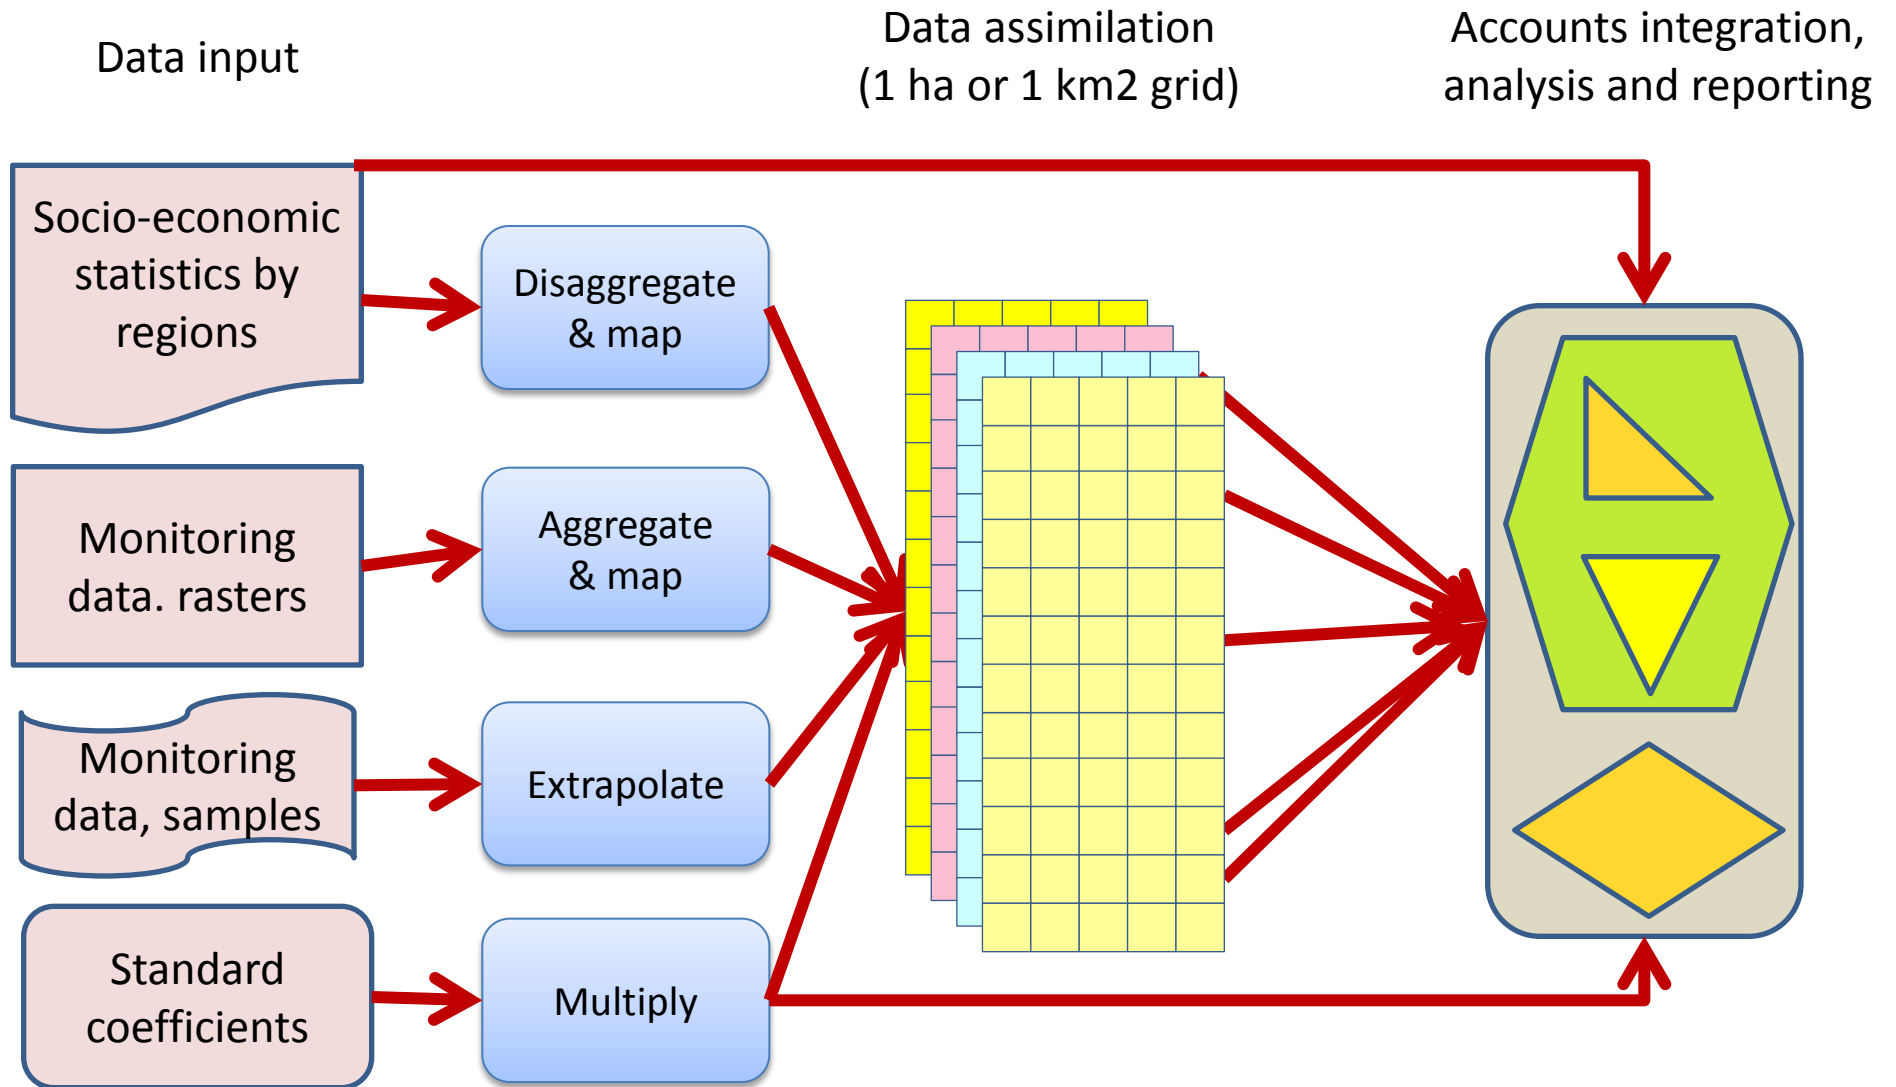

Structure of Ecosystem Natural Capital Accounts
