

27th London Group Meeting on Environmental Accounting

What's the most valuable thing that you learned during this session?

The experiences of other countries - this will help us in building our own accounts

accountants should not be judged with judging sustainability in extraction of ecosystem services

Timely update on what different countries are doing.

It would be good to hear the presentations.

That discussions on the conceptual framework

Ecosystem value

What's the most valuable thing that you learned during this session?

Ecosystem type definitions must take in account management and intended use for the ecosystem in order to make condition assessment possible.

national examples

rethinking about the interlinkage between capacity, extent and condition

The need for scientific experts to define ecosystem typology according to condition criteria

There is a lot of interesting work going on.

What's the most valuable thing that you learned during this session?

We must further discuss and develop ecosystem capacity

Criteria to judge sustainability to be set by scientists not statisticians

Interesting discussion about where capacity is dealt with in the biophysical accounts vs in the monetary accounts

Capacity a difficult issue and needs some more work

'produced' water needs more clarification and ecosystem accounts are

conceptual level: further

What's the most valuable thing that you learned during this session?

various cases of applying ecosystem accounting

The close (and problematic) link between condition, capacity, conversion and scale.

THE EXPERIENCIES OF OTHER COUNTRIES (GERMANY, SOUTH AFRICA, ETC)

To add a more detailed temporal scale for each account. Especially when a condition variable is affected, the

The way of define the approaches to analyze

That every accounts is very complex
