

Biodiversity Observations for Decision-Making: From Data to Decision

Mike Gill

GEO BON Co-Chair

NatureServe Director of Biodiversity
Indicators Program

Expert Meeting on SEEA Indicators for SDGs
and Post-2020 Agenda for Biodiversity
Cambridge, UK

Biodiversity Data: Many Deficiencies

Taxonomic Bias

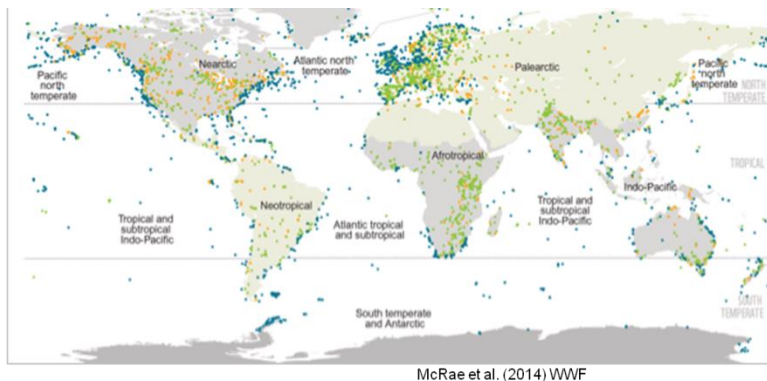

Pereira, H.M. et al (2012) *Annual Review of the Environment and Resources*.

Impact & personal bias

Spatial dimension

McRae et al. (2014) WWF

Temporal dimension

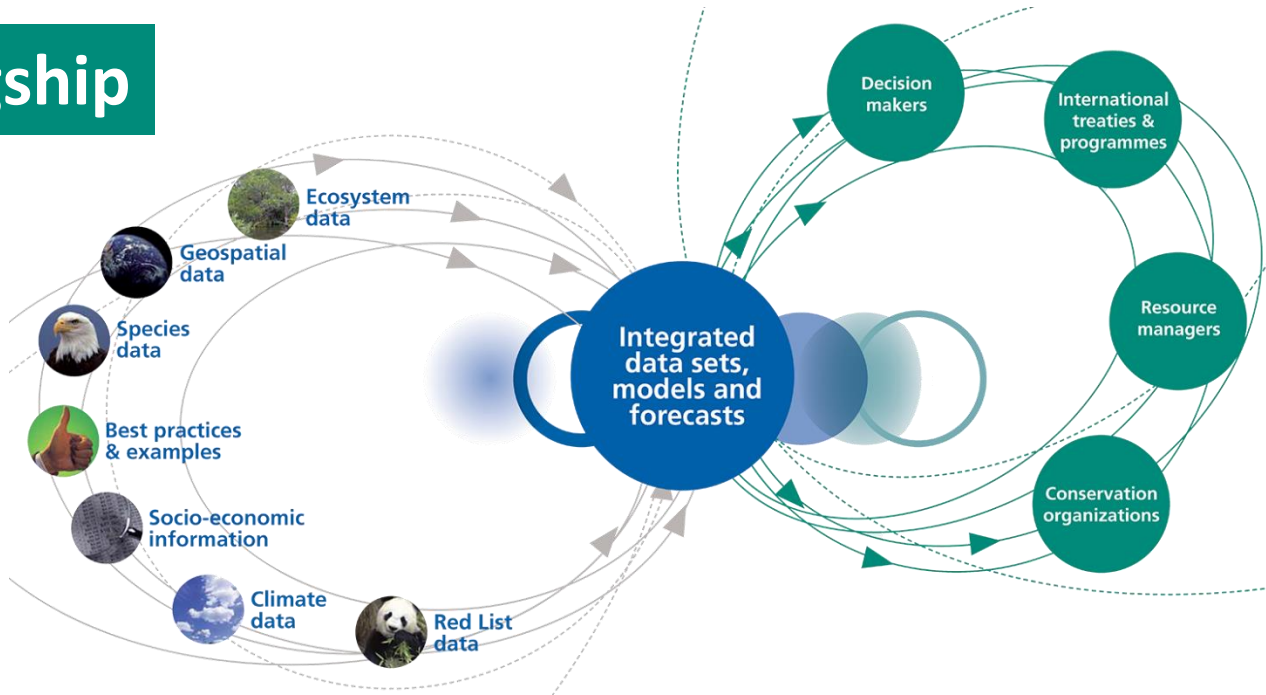

Pereira, H.M. et al (2012) *Annual Review of the Env. & Resources*.

What is GEO BON?

Mission

Improve the **acquisition**, **coordination** and **delivery** of biodiversity observations and related services to users including decision makers and the scientific community.

GEO Flagship

Vision

A **global biodiversity observation network** that contributes to effective **management policies** for the world's biodiversity and ecosystem services.

What is **GEO?**

A Global, Coordinated,
Comprehensive and Sustained
System of Observing Systems

Countries have borders. Earth Observations don't.

EARTH OBSERVATIONS FOR THE SUSTAINABLE DEVELOPMENT GOALS

Earth Observations in Service of the 2030 Agenda

Purpose:

Organize and extend the potential of Earth observations and geospatial information within GEO to advance the 2030 Agenda and enable societal benefits through achievement of the SDGs.

Key Emphasis:

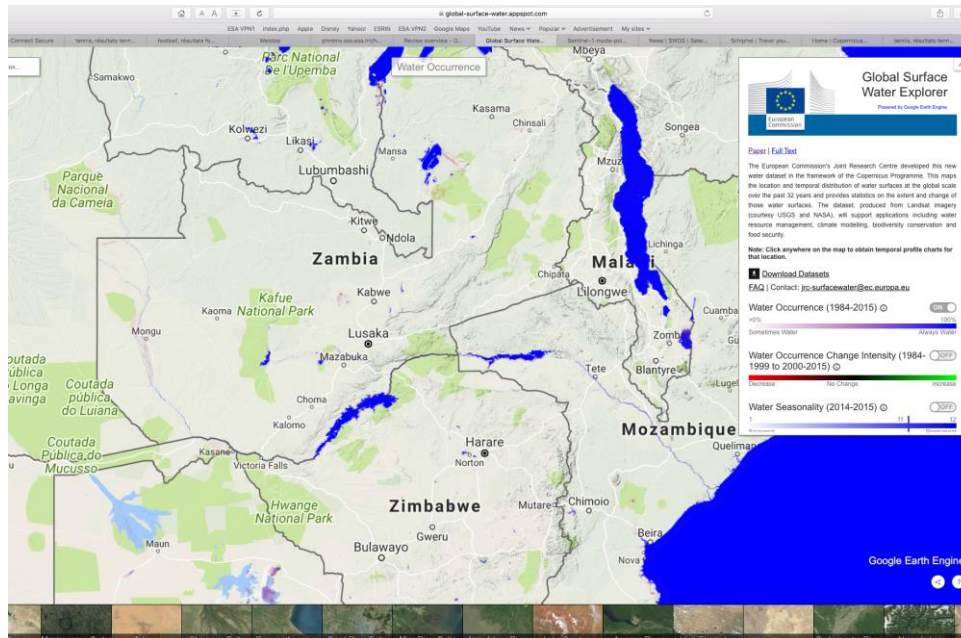

Collaborations with global statistical community, NSOs, line ministries, custodian agencies. Also, communication role in a federated approach to GEO community.

Target Contribute to progress on the Target, not necessarily the Indicator										Goal	Indicator Direct measure or indirect support to the Indicator				
						1.4	1.5	1	No poverty	1.4.2					
						2.3	2.4	2.c	2	Zero hunger	2.4.1				
					3.3	3.4	3.9	3.d	3	Good health and well-being	3.9.1				
									4	Quality education					
								5.a	5	Gender equality	5.a.1				
		6.1	6.3	6.4	6.5	6.6	6.a	6.b	6	Clean water and sanitation	6.3.1	6.3.2	6.4.2	6.5.1	6.6.1
					7.2	7.3	7.a	7.b	7	Affordable and clean energy	7.1.1				
								8.4	8	Decent work and economic growth					
					9.1	9.4	9.5	9.a	9	Industry, innovation and infrastructure	9.1.1	9.4.1			
						10.6	10.7	10.a	10	Reduced inequalities					
	11.1	11.3	11.4	11.5	11.6	11.7	11.b	11.c	11	Sustainable cities and communities	11.1.1	11.2.1	11.3.1	11.6.2	11.7.1
				12.2	12.4	12.8	12.a	12.b	12	Responsible consumption and production	12.a.1				
					13.1	13.2	13.3	13.b	13	Climate action	13.1.1				
		14.1	14.2	14.3	14.4	14.6	14.7	14.a	14	Life below water	14.3.1	14.4.1	14.5.1		
	15.1	15.2	15.3	15.4	15.5	15.7	15.8	15.9	15	Life on land	15.1.1	15.2.1	15.3.1	15.4.1	15.4.2
								16.8	16	Peace, justice and strong institutions					
17.2	17.3	17.6	17.7	17.8	17.9	17.16	17.17	17.18	17	Partnerships for the goals	17.6.1	17.18.1			

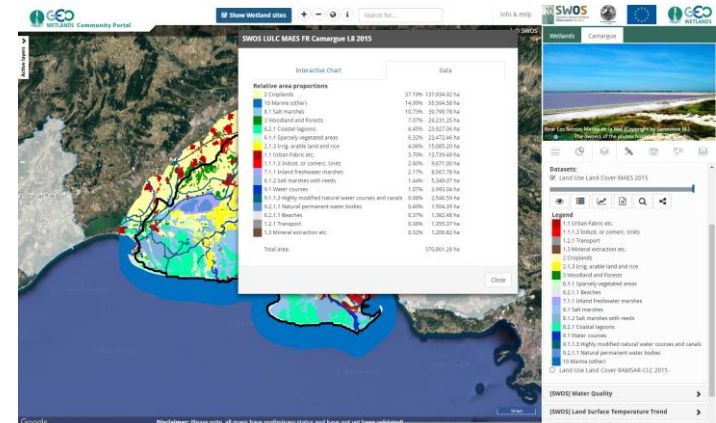

Earth observations for water-related ecosystem monitoring

High quality Global Data Set on spatial extent of inland water bodies (1984-2015, full Landsat archive, 30m, Joint Research Center supported by Google Earth Engine)

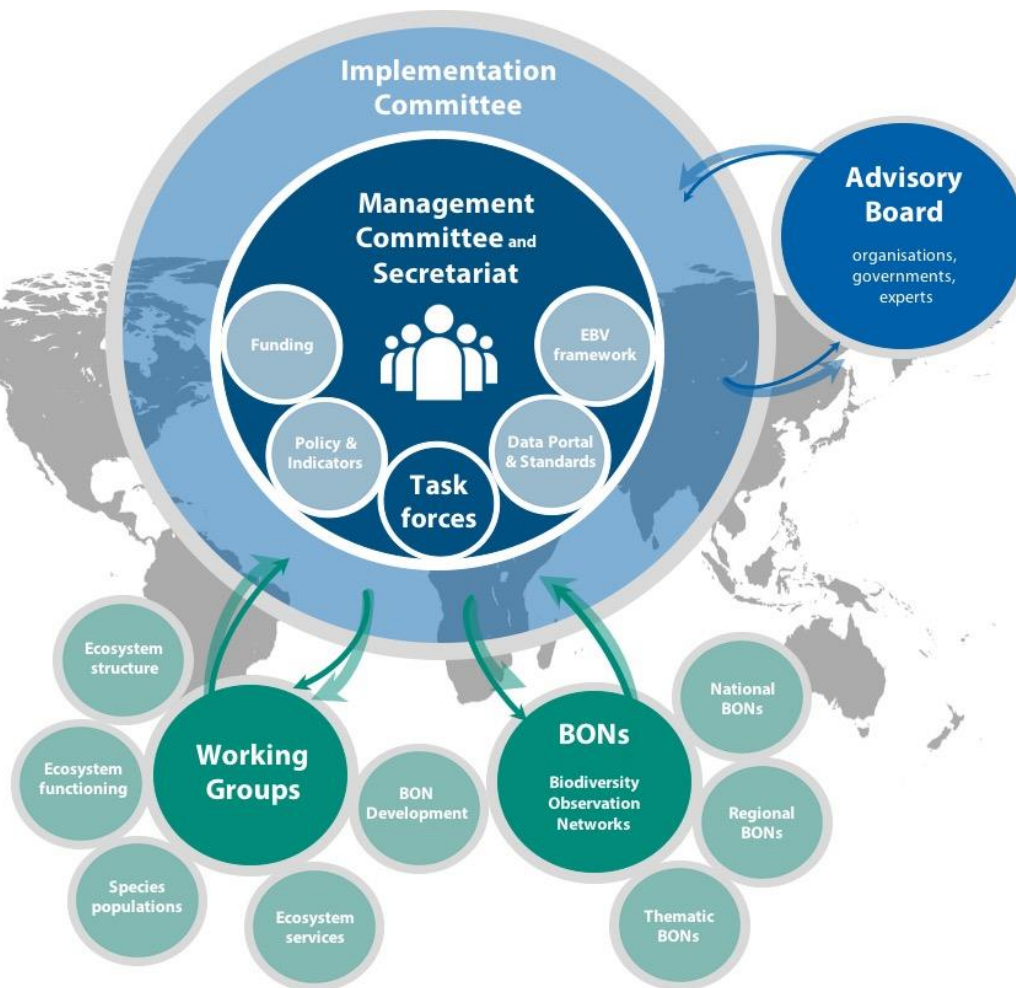

Water-related Community Portal

- Wetland-related datasets freely available
- EO best case practices & guidelines
- Portal customization for SDG 6 monitoring & reporting

GEO BON Governance and Core Focus

Developing a standard and flexible framework for biodiversity observations

Supporting the development of Biodiversity Observation Networks

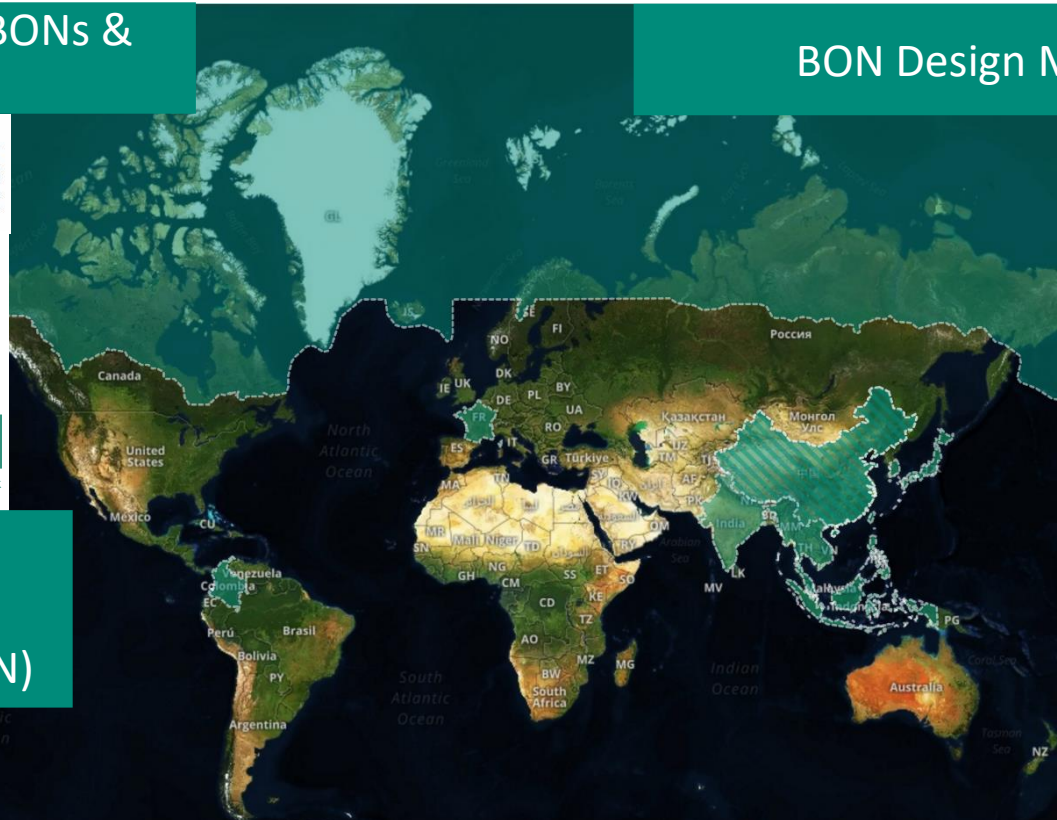

Producing policy relevant outputs

Our Network of BONs: The 'Engines' of GEO BON

Contribute to the **collection** and **analysis** of **harmonised biodiversity observations**, the development of integrated and interoperable **biodiversity monitoring programs**, the development of **data standards** and the **testing and development** of GEO BON **outputs**.

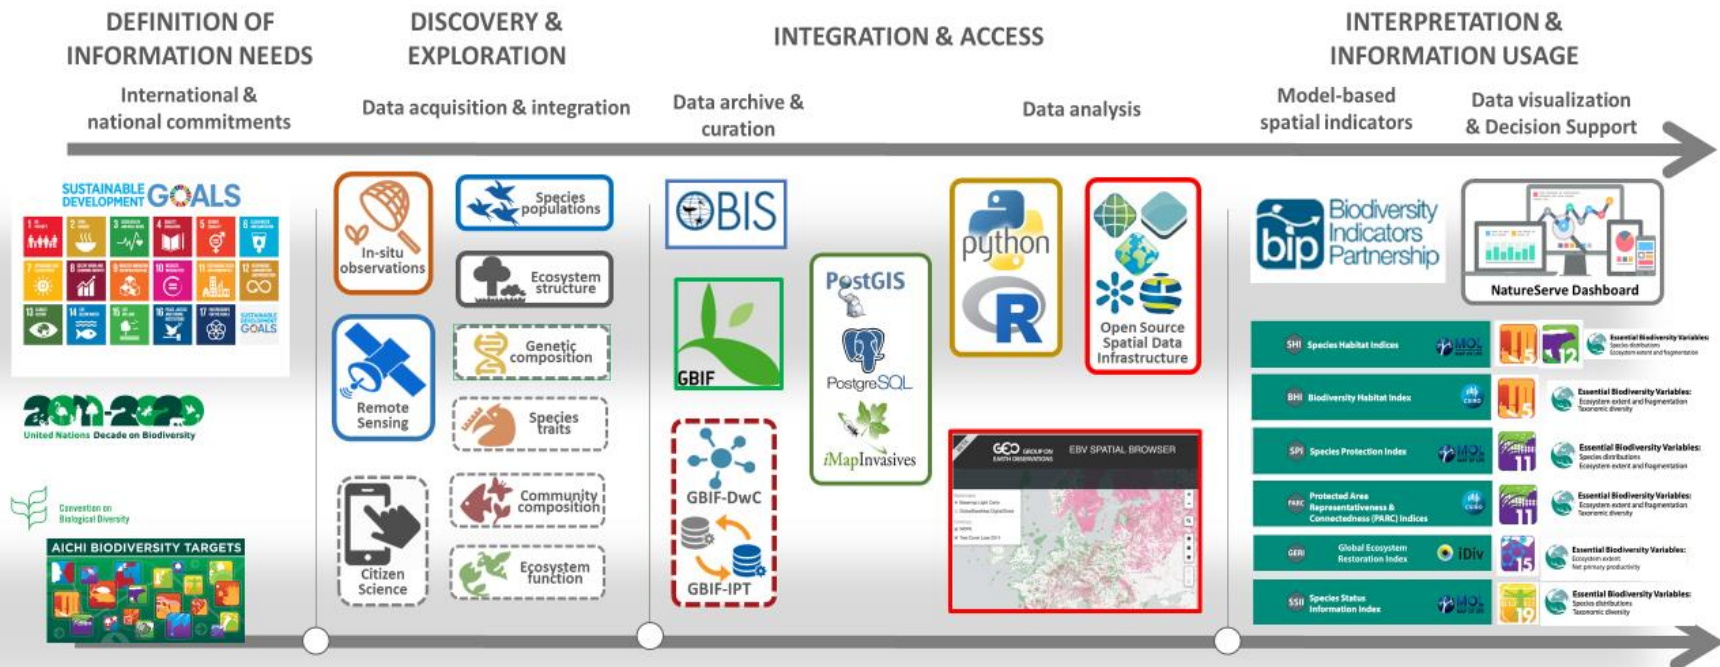

National and Regional BONs & Pilots

BON Design Manual

Thematic BONs
 Marine BON (MBON)
 Freshwater BON (FWBON)

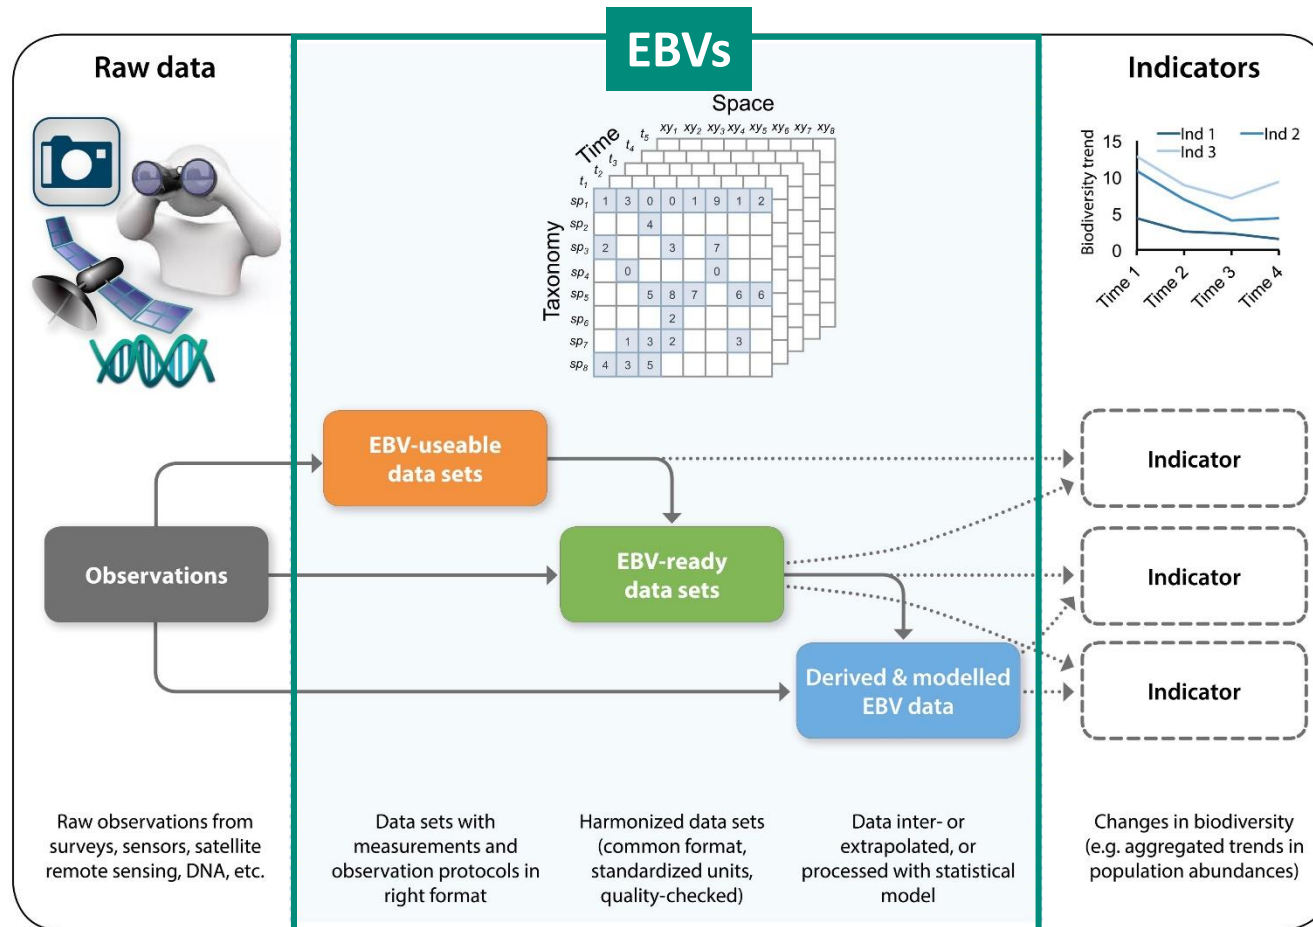

Biodiversity Observation and Information Systems: From Data to Decision

Standard and Flexible Framework for Biodiversity Observations: the Essential Biodiversity Variables

EBVs: Minimum set of measurements, complementary to one another, that can capture major dimensions of biodiversity change.

Users

National Governments

EBVs for Remote Sensing

TRACKING BIODIVERSITY

Ten variables

Proposed variables for satellite monitoring of progress towards the Aichi Biodiversity Targets.

Species populations

- Species occurrence

Species traits

- Plant traits (such as specific leaf area and leaf nitrogen content)

Ecosystem structure

- Ecosystem distribution
- Fragmentation and heterogeneity
- Land cover
- Vegetation height

Ecosystem function

- Fire occurrence
- Vegetation phenology (variability)
- Primary productivity and leaf area index
- Inundation

Skidmore, A. et al (2015) *Nature*

EBVs and the SDGs

SUSTAINABLE DEVELOPMENT GOALS

Candidate EBV classes

	2.4 2.5	Ecosystem structure Ecosystem function Genetic composition
	3.D	Species populations
	6.3 6.6	Ecosystem function Species Populations Ecosystem Structure
	11.3	Ecosystem Structure
	14.4 14.5	Species Populations Ecosystem Structure
	15.1, 15.2, 15.3, 15.4, 15.5, 15.7, 15.8, 15.c	Ecosystem Structure Species Populations Ecosystem Function

MBON
Marine Biodiversity
Observation Network

Indicator 14.5.1.

Coverage of protected areas in relation to marine areas

Target 14.2

Prototype product to integrate EO, OBIS data, local surveys

Policy relevant outputs

SUSTAINABLE DEVELOPMENT GOALS

GEO BON

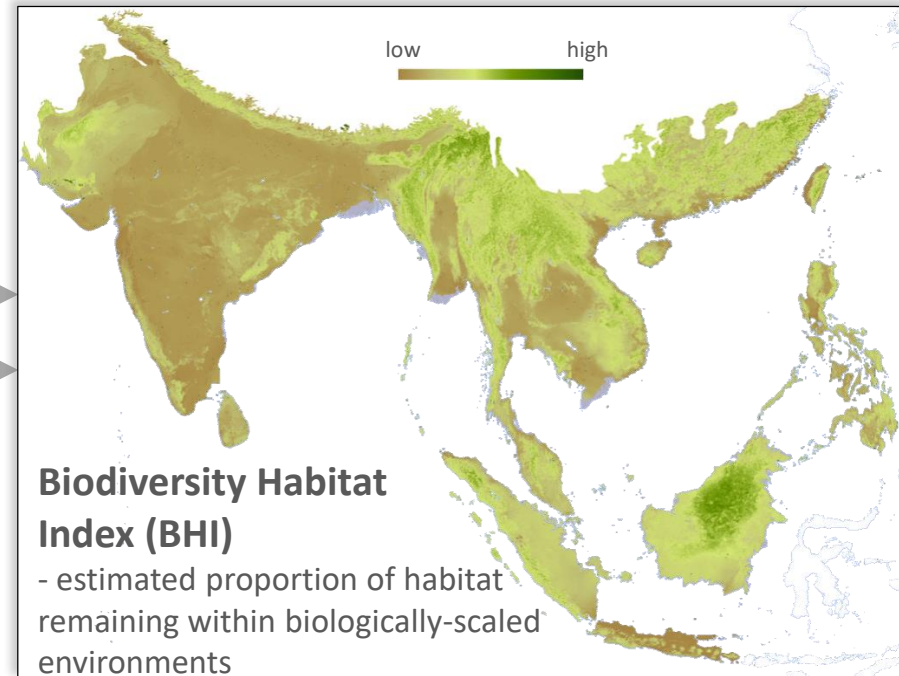

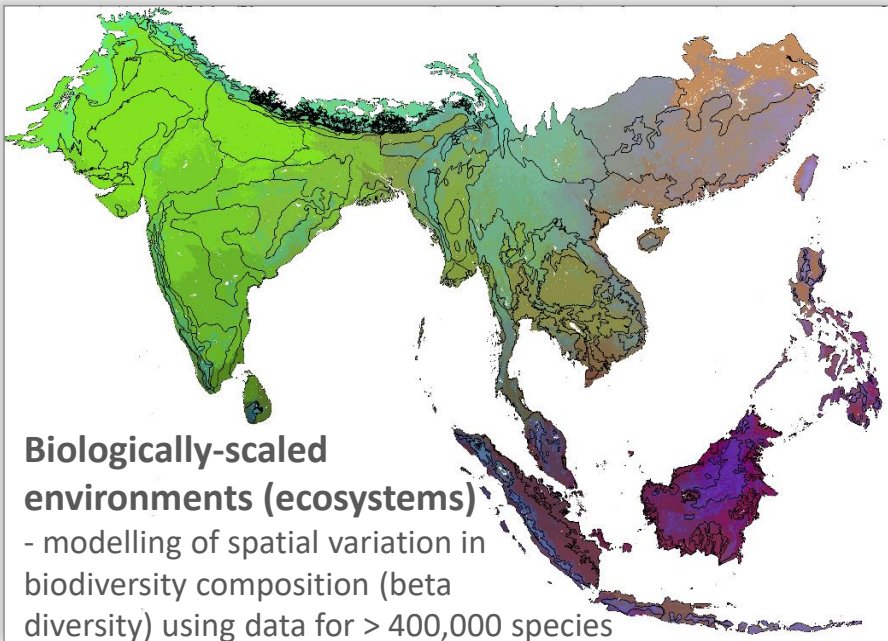

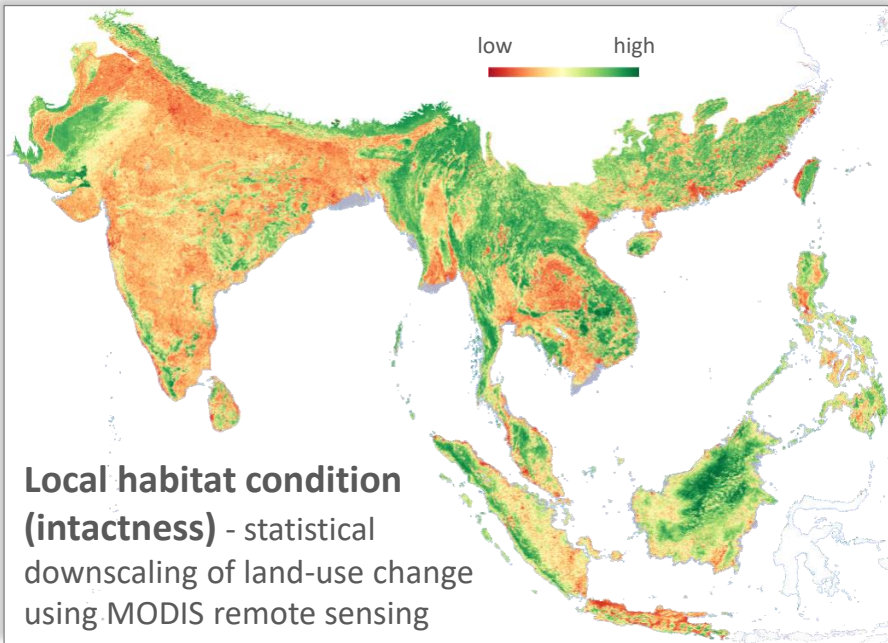

Global Biodiversity Change Indicators

Model-based integration of remote-sensing & in situ observations that enables dynamic updates and transparency at low cost

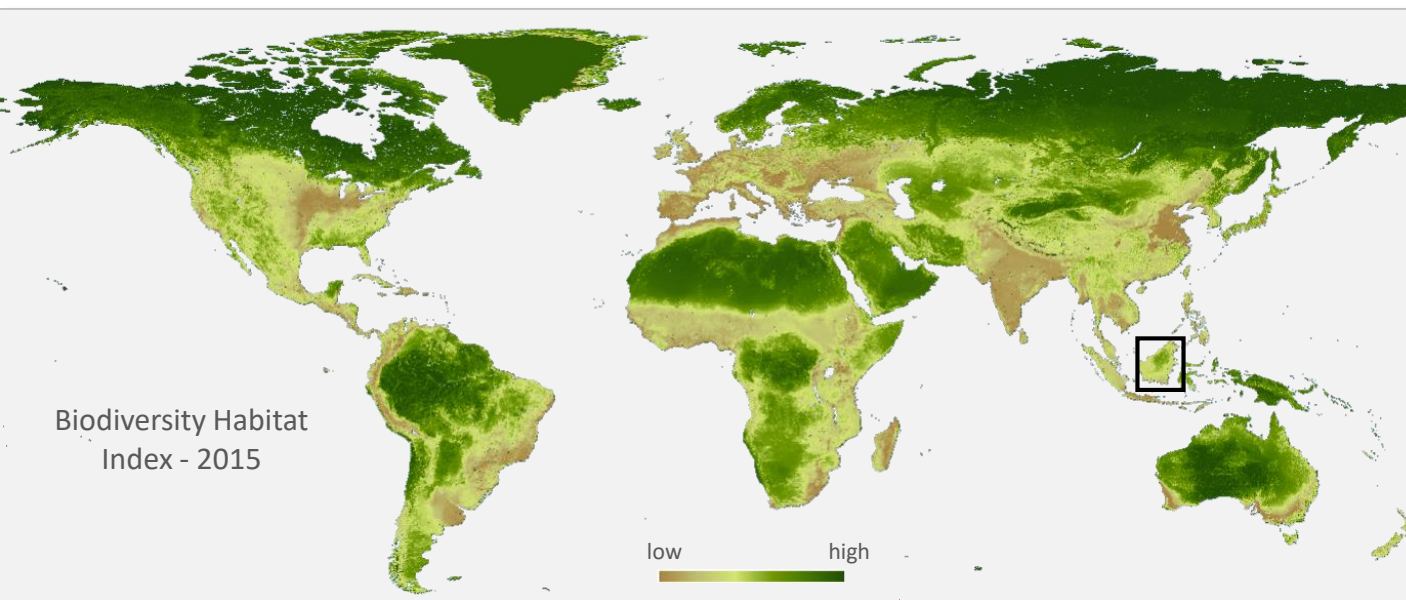

Biodiversity Habitat Index (BHI) – Aichi Target 5

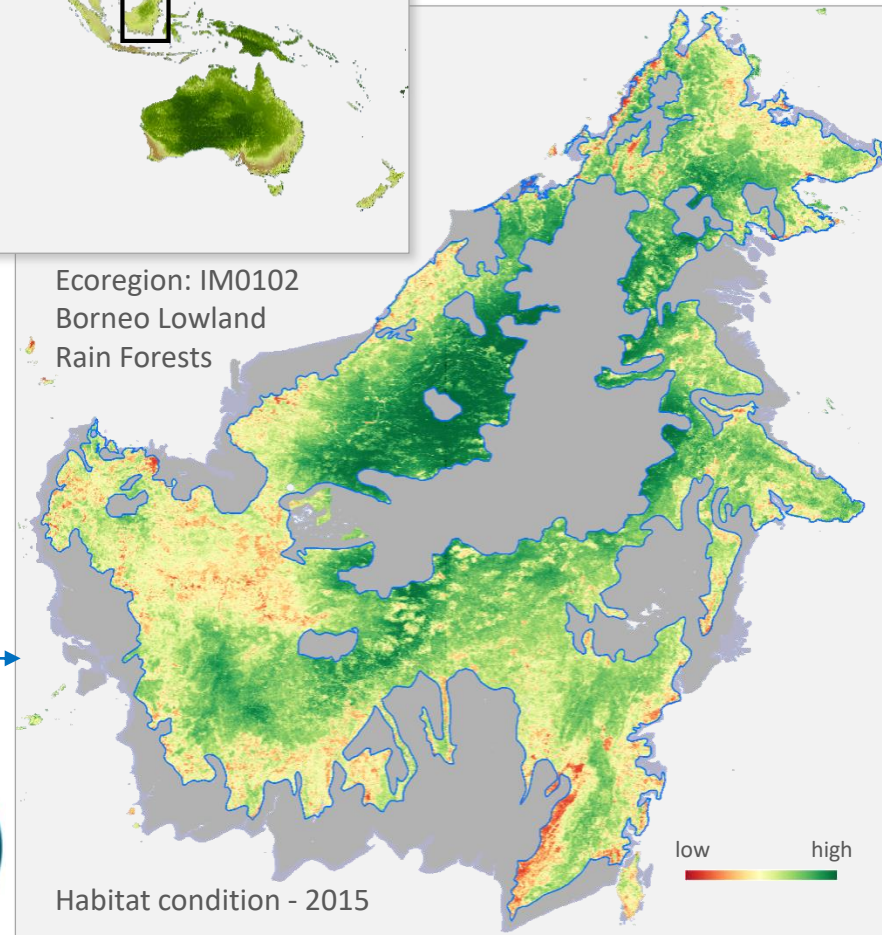

- Combines remotely monitored habitat condition with modelled spatial variation in biodiversity composition
- Derived at 1km grid resolution across the entire land surface of the planet

The BHI is recalculated, using remote-sensing inputs from different years, to report change in habitat retention across all biologically-scaled environments occurring within any given spatial unit (e.g. country, ecoregion, the entire planet)

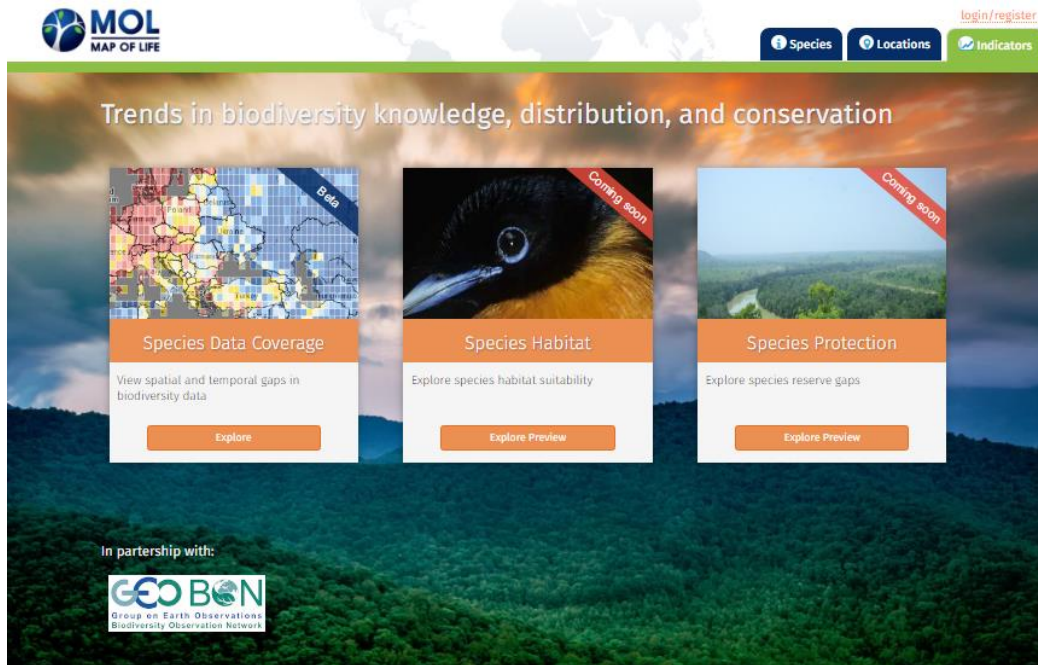

occurring within any given spatial unit (e.g. country, ecoregion, the entire planet)

Indicators

Geographic distribution

Range size **6,549 km²** 23,170 km²
Suitable Total

Map improvement **52 %** 12
(35 % - 55 %) Validation points

[Records outside suitable range](#)[Records in suitable range](#)[Suitable range](#)[Strict Parks](#)[All Parks](#)

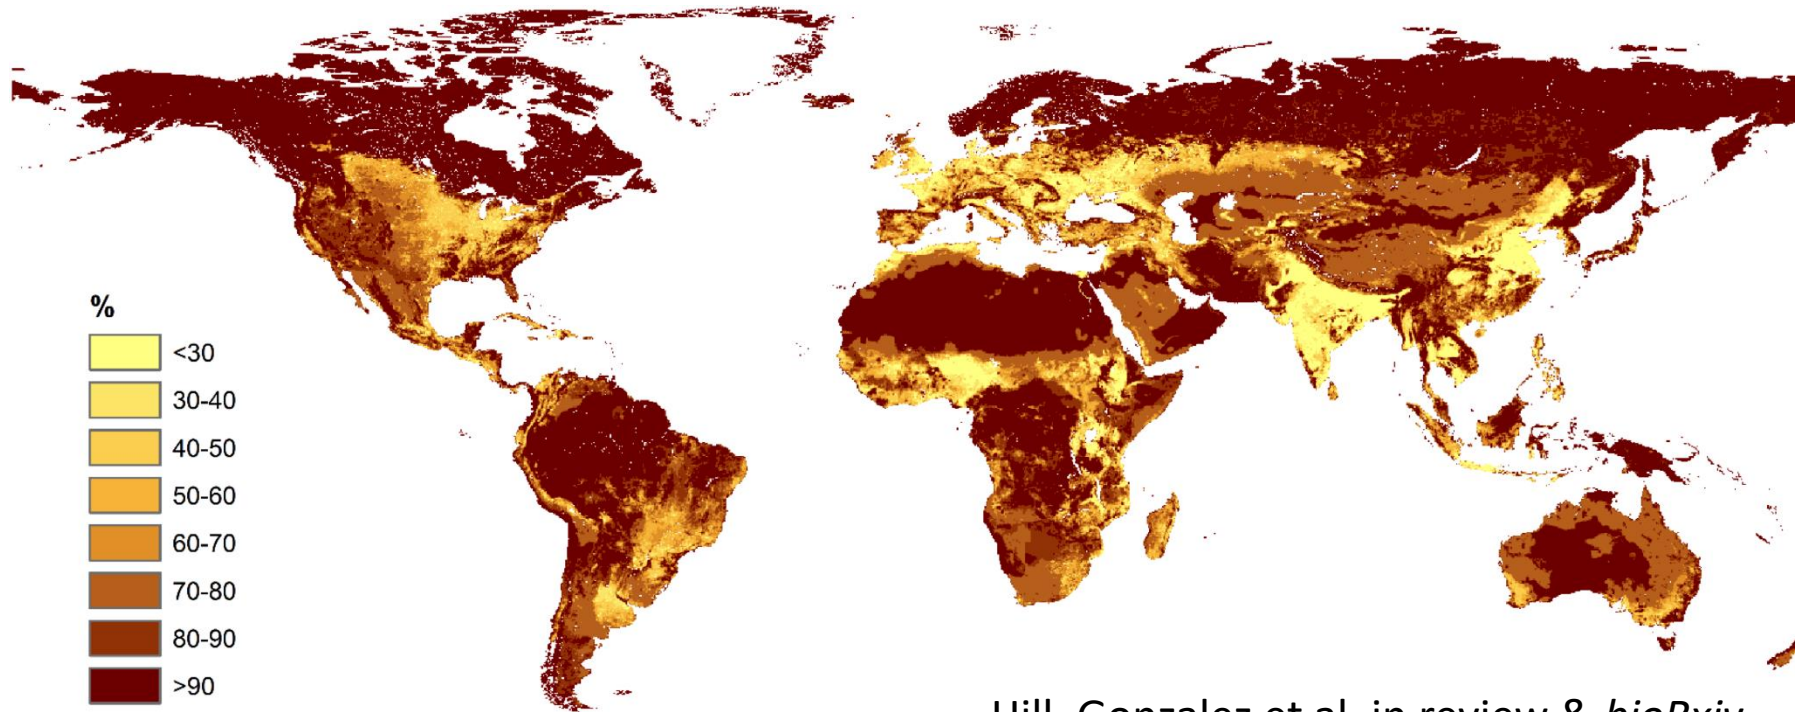

Maximum protected area coverage within suitable habitat.

	Any size	Larger than 10 km ²
Strict Parks	1	1
All parks	10	7
All parks area	1,166 km ²	1,154 km ²
Target area	4,540.6 km ²	
Target realized	25.7%	

Minimum reserve size:

Biodiversity Intactness Index (Aichi Targets 12 & 14) = estimated average fraction remaining of abundance of original species

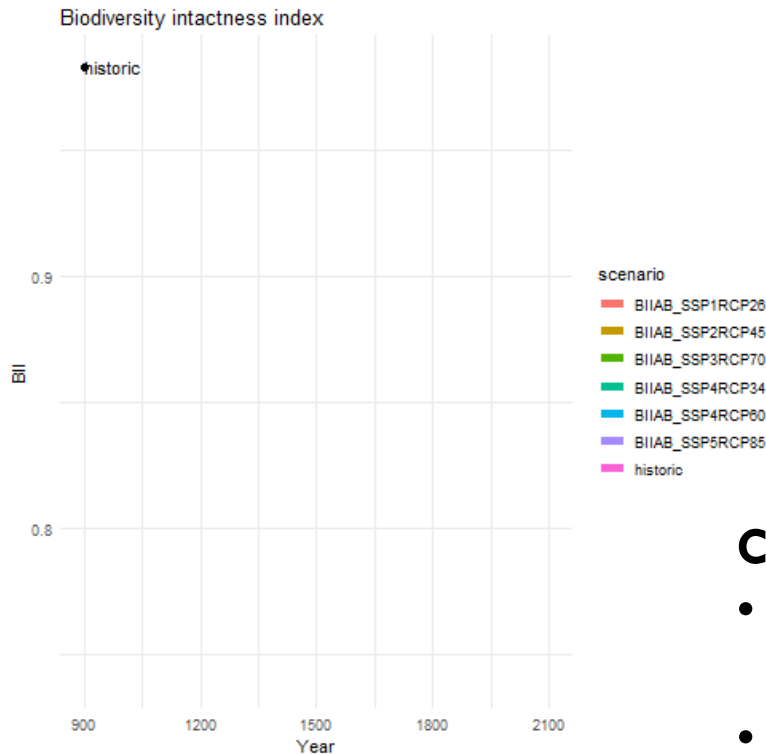

Hill, Gonzalez et al. in review & *bioRxiv*

- BII proposed by Scholes & Biggs (2005 *Nature*) as indicator of **community composition**
- Implemented by PREDICTS in 2016 (*Science*), but data and analyses have since improved:
 - Better differentiation of land uses; better use of data on roads and human population
 - New map (above) rectifies most of the perceived weaknesses of the 2016 map
- Adopted as 'core' indicator by IPBES; available on BIP dashboard

Recent and upcoming developments to BII

Hindcasts & (using SSPs) projections

Hill, Gonzalez et al. in review & *bioRxiv*

Annual BII at high spatial resolution (1 km)

De Palma et al. in review & *bioRxiv*

Coming up:

- Use newly-available plantation forest mask
 - Improve estimates in S E Asia especially
- Explicit modelling of lagged responses
 - Necessary data already collated
- Integrating more drivers
 - Collaboration with *GLOBIO*

Result: comparing proposed with used indicators

GEO/GEO BON and the UN SEEA: Exploring Links

- **National Observation Network Design:** potential links between GEO BON Observation Design Process and the Experimental Ecosystem Accounting approach
- **EBVs Data Sources:** aligning data collection efforts as inputs
- **EBV Modelled Indicators:** as input or output indicators
- **EO for SDGs:** aligning this initiative to serve the SEEA

Thank-you!
