

Issue A.4, “How can SEEA CF accounts be made spatially explicit”

Please fill in the table below and hand back before the meeting or on the Monday. We will consolidate the results and discuss in the A.4 session.

| <b>Issue</b> | <b>#</b>  | <b>Para</b> | <b>Brief</b>                                                               | <b>Promote to recommendation? (yes/no/needs discussion)</b> |
|--------------|-----------|-------------|----------------------------------------------------------------------------|-------------------------------------------------------------|
| A4.1         | Option 1  | 5           | New section in chapter 2                                                   |                                                             |
|              | Option 2  | 6           | Fix current wording in chapter 2                                           |                                                             |
| A4.2         | Option 1  | 11          | All sub-national account references to be spatial accounting               |                                                             |
|              | Option 2  | 12          | Use the term 'geographical' for sub-national accounts                      |                                                             |
|              | Option 3  | 13          | Detailed spatial typology and glossary for EEA                             |                                                             |
| A4.3         | Option 1  | 22          | Adopt EA approaches, define Environmental Accounting Area                  |                                                             |
|              | Option 2  | 24          | Create Spatial accounting technical note with EA links                     |                                                             |
| A4.4         | Option 1  | 35          | Defined fully spatial accounts and partially spatially accounts            |                                                             |
|              | Option 2  | 36          | Include table on which EEA are suitable for spatial accounting             |                                                             |
| A4.5         | Option 1  | 58          | Use the term 'extranational' for all global commons                        |                                                             |
|              | Option 2a | 59          | Relabel current treatment as global commons                                |                                                             |
|              | Option 2b | 60          | Bring back SEEA 2003 definition in chapter 2                               |                                                             |
| A4.6         | Option 1  | 66          | Additional wording for new section in chapter 2                            |                                                             |
|              | Option 2  | 67          | Include a detailed annex to chapter 2 on work needed for each account      |                                                             |
|              | Option 3  | 68          | Include detail in a technical note for spatial accounting                  |                                                             |
| A4.7         | Option 1  | 78          | New text for a new section in chapter 2                                    |                                                             |
|              | Option 2  | 79          | Elaborate links to disaster risk management and others in a technical note |                                                             |
|              | Option 3  | 80          | Table in chapter 6 linking SEEA to disaster risk management and others     |                                                             |
| A4.8         | Option 1  | 90          | New text for a new section in chapter 2                                    |                                                             |
|              | Option 2  | 91          | Create Spatial accounting technical note with more detail on approaches    |                                                             |
