Regional Training Programme on the SEEA Experimental Ecosystem Accounting for African countries

concept note

*The Regional Training Programme on the System of Environmental Economic Accounting 2012—
Experimental Ecosystem Accounting (SEEA EEA) for African countries to be launched on in August
2019.*

*The programme consists of a self-paced online training with webinar sessions, an in-person workshop
and follow-up country activities.*

The e-learning phase can be accessed at the UNSD e-learning platform:

<https://elearning-cms.unstats.un.org/>

Meeting documents will be available on the UNSD/SEEA events page in due course:

<https://seea.un.org/>

STATISTICS SOUTH AFRICA

United Nations

Background and Objectives

1. In March 2013, the United Nations Statistical Commission endorsed the System of Environmental-Economic Accounting 2012–Experimental Ecosystem Accounting (SEEA EEA) as the basis for commencing testing and further development of this new field of national accounting. The SEEA EEA was formally published in 2014 and constitutes an integrated statistical framework for organizing biophysical data, measuring ecosystem services, tracking changes in ecosystem assets and linking this information to economic and other human activity.
2. From a zero base in 2012, there are currently over 30 countries with ecosystem accounting programs of some type underway and there are applications in, and participation from, all sectors – public, private, academia and civil society. To support the uptake the United Nations Statistics Division (UNSD), UN Environment, and the Secretariat of the Convention on Biological Diversity (CBD) are implementing a project called “Natural Capital Accounting and Valuation of Ecosystem Services” that is funded by the European Union. The project aims to build on SEEA EEA as the internationally agreed methodology and on the development of national competences, the project initiates pilot testing of the SEEA EEA in partner countries to advance the knowledge agenda on natural capital accounting.
3. The Training Programme will be organized as one of the activities of the above-mentioned EU-funded project and will be implemented in cooperation between Statistics South Africa (Stats SA), the United Nations Statistics Division (UNSD), the United Nations Environment Programme (UN Environment), the Gaborone Declaration for Sustainability in Africa (GDSA) and the United Nations Economic Commission for Africa (UNECA). The Programme will contribute to building capacity on ecosystem accounting for African countries.
4. Adoption and implementation of the SEEA EEA will require significant training of statistical and non-statistical professionals throughout the National Statistical Systems. This training will aim to strengthen capacities for the development of capacity in ecosystem accounting among professionals in the National Statistical Offices (NSOs) and related line-ministries from the African countries, as the use of the information provided by ecosystem accounting for policy-makers.
5. The objectives of the training are:
 - To help participants acquire knowledge and skills to deepen their understanding of the accounting principles and basic data needs for compiling ecosystem accounts and valuing ecosystem services based on the SEEA EEA;

- To become acquainted with the various biophysical modeling tools and global data resources;
- To facilitate experience sharing among participating countries;
- To support policy-makers in understanding and using the information provided by ecosystem accounting in informed decision-making; and
- To support countries in setting up a strategy for the SEEA EEA implementation.

Organization

6. The training program is based on a blended learning format consisting of three phases: an online course, an in-person training (regional workshop) and a follow-up phase.

Phase 1: Online course (from late-August to October 2019)

7. The participants will attend a self-paced online course to assure a common level of technical knowledge on the SEEA EEA. The online course will be accessible via the UNSD e-learning platform (<https://elearning-cms.unstats.un.org/>). The amount of time that participants will need to spend on the online course will be 6-8 hours per week, up to a total of 64 hours over 8 weeks. The online course is a prerequisite for participation in the in-person Workshop (Phase II).
8. The online course consists of the following eight modules:
 - Module 1: Key concepts on SEEA EEA
 - Module 2: Spatial units
 - Module 3: Ecosystem extent
 - Module 4: Ecosystem condition
 - Module 5: Ecosystem services
 - Module 6: Carbon accounting
 - Module 7: Water accounting
 - Module 8: Biodiversity accounting
9. In addition to the self-paced online modules, there will be several live online sessions (webinars) with SEEA EEA experts that will highlight the key points of the modules and provide examples on how the various accounts have been implemented in countries. The first live webinar is scheduled for 27 August 2019.

Phase 2: Regional Training Workshop, 28-31 October in Pretoria, South Africa (by invitation only)

10. During the in-person training workshop, selected participants who completed the online training will further deepen their knowledge on the SEEA EEA, discuss the content of the online course, answer questions raised during the online course, and have an opportunity for hands-on training with data. The workshop will consist of three and a half days and will take place in Pretoria, South Africa on 28-31 October 2019.
11. During the training workshop participants will also discuss and share their experiences on the implementation of the SEEA EEA, as well as special sessions will be organized for policy-makers to strengthen their understanding and use of ecosystem accounting. The training may explore further technical issues related to the SEEA EEA, including ecosystem-related indicators for informing the Sustainable Development Goals (SDGs) indicators.

Phase 3: Follow-up in countries (1st half of 2020)

12. Participants of the in-person training are expected to take follow-up actions after the workshop, such as (i) conducting a national training workshop on SEEA EEA; (ii) formulating a national strategy and work plan for the implementation of SEEA EEA; and (iii) if needed, requesting further technical assistance from the training organizers for the implementation of SEEA EEA.

Participants

13. The first phase of the training (the online course) can be attended by all that express an interest in participating in the course. Countries are welcome to identify relevant staff from the NSOs as well as relevant line ministries who would benefit from the online training. For the in-person workshop (second phase), a limited number of participants from selected African countries will be invited directly. Attendance in the online phase of the training is required for attendance in the in-person phase.
14. Nominated participants should ideally have experience in SEEA or related fields such as environmental accounts, national accounts, environment statistics and geospatial information. Moreover, participants should have environmental-economic accounts as part of their professional responsibilities.
